FUNCTION SHEET

Ref: FOR-RH 02-02 Version: May 2026

1. POSITION IDENTIFICATION

Position: Reception Quality Technician (Incoming Quality Technician)

Department: Quality

Reporting: Reports to the Supplier Quality Engineer or the Quality Manager

Location: Manzil Harb, Monastir

2. MAIN MISSION

- Guarantee that all raw materials (plastic resins), components (pumps, seals, inserts) and decoration consumables (inks, varnishes, sheets of hot stamping) entering the MYC factory are strictly in accordance with the standards luxury. It is the first line of defense to avoid the introduction of defects into the production cycle.

production.

3. DETAILED DESCRIPTION OF TASKS

A. Inspection and Control on Receipt

- Visual and dimensional inspection: Check the appearance (color, absence of pollution), the critical dimensions and physical characteristics of materials in relation to technical specifications.
- Functional tests: Test the proper functioning of mechanical components or electronics before being put into stock.
- Statistical sampling: Take samples according to a defined plan, generally based on the AQL (Acceptable Quality Level) standard, to evaluate statistically the quality of the lot received.
- Verification of documentation: Systematically check the presence and validity of Certificates of Conformity (CoC), analysis reports and certificates material.

B. Management of Non-Conformities (Disputes)

- Identification and isolation: Clearly identify non-compliant products using a specific labeling and physically separate them in a quarantine zone to avoid any accidental use.
- Returns management (RMA): Record defects factually, document anomalies (photos, measurements) and administratively manage the return of goods to the supplier.
- Decision and treatment of discrepancies: Participate in arbitration to decide on acceptance under exemption, total rejection, 100% sorting or rework of the batch.

C. Management and Monitoring of Suppliers

- Performance monitoring: Contribute to the periodic evaluation of the quality of deliveries for each supplier.

- Audit and collaboration: Participate, if necessary, in flash audits or visits to the supplier to validate their manufacturing processes.
- Improvement loop: Send non-compliance reports to suppliers to initiate corrective actions and reduce future defects.

D. Documentation and System

- Standardization: Create and maintain personalized inspection procedures for each type of product (e.g. specific criteria for galvanized parts).
- ERP recording: Record all control results (compliant or not) in the company management system (ERP) to ensure full traceability.

4. JOB REQUIREMENTS (DETAILED)

Education: Minimum Bac+2 in plastics processing, chemistry or quality management.

Experience: 2 to 3 years in reception control in a demanding industrial environment.

Technical Skills:

- Mastery of measuring instruments (caliper, micrometer, spectrometer color).
- Reading technical plans and geometric tolerances.
- Knowledge of plastic processing defects.

Personal Qualities: Methodological rigor, intellectual honesty (integrity of control) and firmness in the face of production emergencies.
